

Post-Mortem Note:

Whitelist Function in BABEDINO Token

Contract Address: 0x1CE070f548AC67825e2AAAd4368Af9A78ce0C6080

Chain: BNB Smart Chain (BSC)

Token Name: Lovely Baby Dino (BABEDINO)

🔍 Why a Whitelist Was Originally Included

The whitelist feature in the BABEDINO token contract was implemented **strictly as a protective measure during the launch phase**, to:

- Prevent sniper bots
- Ensure early buyers were legitimate
- Maintain fair distribution

No additional privileges, such as tax exemption or long-term access, were granted to any wallet via the whitelist.

🔒 Current Status of the Whitelist Logic

- whitelistEndTime is **permanently set to 0**
- The contract **owner is renounced**
- **No one can modify, re-enable, or add new whitelist addresses**
- All functions that relied on whitelist status are **inactive** and will **always return false** for use

You can verify this via:

- Read Contract tab on BscScan → whitelistEndTime = 0
- Ownership is 0x00

❏ Why Scanners May Still Show "Whitelist: True"

Blockchain scanners like GoPlus and TokenSniffer use automated checks to detect the presence of whitelist-related variables or mappings (e.g., isWhitelisted[address] == true) — even if those cannot be used anymore due to contract lock.

This is a **false positive**, and the team has:

- Publicly documented that whitelist logic is disabled
- Requested scanner platforms to update their flag status
- Provided Security Statement (PDF) and Proof of Safety (PDF)

✓ **Final Clarification**

BABEDINO token has **no active whitelist, no taxes, no backdoors**, and **fully renounced ownership**.

All holders can trade freely, and no address is given priority or advantage.
